

1. PROJECT TITLE

-- CLI-Based System Metrics Tracker with Bash

2. PROJECT DESCRIPTION

-- A Bash-based command-line script that logs core system health data (CPU, RAM, Disk usage) on a regular schedule using cron.

-- Useful for resource monitoring, system diagnostics, and lightweight server tracking without the need for heavy agent-based tools.

-- Sends email alerts using mailutils when usage exceeds predefined thresholds.

-- Designed for Linux-based systems; tested on Ubuntu.

3. PROJECT FOLDER CONTENTS

-- This README.pdf file.

-- health_logger.sh: The main Bash script that checks and logs system metrics.

-- instructions_and_set-up.pdf: A short written report and set-up guide.

-- health.log: An example log output file.
